Plan Estimate Record Sheet

P.E.R. Sheet

Task	Estimated Time of Completion *(minutes)*	Actual Time Spent *(minutes)*
Initalise project	5	5
Create base game scene	2	3
Create You win and game over canvas text overlays on screen	3	7
Search, download and edit assets for helicopter, trees, base and soldiers	10	16
Creating repository on Github	3	6
Create game manager object, keeping track of soldiers on field, hospital and in helicopter	5	7
Collision detections with soldiers and hospital, updating soldier counts	5	9
Implement movement logic for the helicopter + heliController script	5	8
Collision detection with tree, ending game and displaying end game screen.	5	7
Ability to reset game by pressing ‘R’	5	3
Create detection when no soldiers are left on field or helicopter, displaying victory	5	1
Create sound effect when picking up soldier	5	2

Reflection:

Finding workable assets and then re-editing them to fit with the needs of the project took longer than expected. Trying to figure out what Unity has changed also took a while for a few assumed-to-be basic tasks (such as trying to get helicopter movement going or trying to figure out TextMeshPro for unity). Overall, re-adjusting to how the working environment (Unity) made up the most of the difference between time estimates and time actually spent. In other case, the time spent was actually much shorter than the estimate due to implementation familiarity, This could only be improved with better estimates and working environment familiarity during further projects/iterations.

Extra Feature(s):

Implemented a basic version of ransom soldier generation as extra features. Also, implemented a basic application quit function.
